Art Unit: 1755

The listing of references in the specification is not a proper information disclosure statement. 37 CFR 1.98(b) requires a list of all patents, publications, or other information submitted for consideration by the Office, and MPEP § 609 A(1) states, "the list may not be incorporated into the specification but must be submitted in a separate paper." Therefore, unless the references have been cited by the examiner on form PTO-892, they have not been considered.

The Japanese references cited in the information disclosure statement of 13 August 2004 with respect to the supplied translations.

The disclosure is objected to because of the following informalities: The phosphor having general formula I cannot exist since it has a total of three halogen anions, but $(\text{Ba}_{1-x}\text{M}'_x)$ has a +2 valence state. Appropriate correction is required.

Claims 1-7 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to enable one skilled in the art to which it pertains, or with which it is most nearly connected, to make and/or use the invention.

The claimed phosphor cannot exist since it has a total of three halogen anions, but $(\text{Ba}_{1-x}\text{M}'_x)$ has a +2 valence state. Since this phosphor cannot exist, it cannot be enabled. U.S. patents 6,531,073 and 5,360,578 teach the correct formula for the claimed phosphor.

Claims 1-7 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claimed phosphor cannot exist since it has a total of three halogen anions, but $(\text{Ba}_{1-x}\text{M}'_x)$ has a +2 valence state. Since this phosphor cannot exist, the claims are indefinite.

U.S. patent application publication 2004/0229154 is cited as of interest since it teaches surface treating an europium activated alkaline earth halide phosphors with a fluorine containing compound, such as a fluoropolymer, to prevent moisture absorption of the phosphor, which is known to cause deterioration of the phosphor. U.S. patents 4,138,361 and 5,360,578 show moisture absorption of halogen containing phosphors cause deterioration of the phosphor.
